

Information on SODIUM BICARBONATE (EC 205-633-8, CAS 144-55-8) for Downstream Users (DUs) and DUs' Trade Associations and communication on uses and exposure scenarios.

Sodium bicarbonate is manufactured in a quantity of more than 1000 tonnes per year and therefore submission of a first registration dossier is needed before 1 December 2010.

Hazards of sodium bicarbonate

Sodium bicarbonate is not classified. As a consequence, no Chemical Safety Assessment is needed in the registration dossier, and as a further consequence, no Exposure Scenarios are needed, which in turn imply that no detailed and exhaustive inventory of uses is needed for the preparation of the dossier.

Therefore the supply chain communication about identified uses, particularly the active application of Article 37 of the REACH Regulation, is not needed for sodium bicarbonate.
